

Transferring plane files from iX20 to PC

Plug the USB port on the iX20 into your PC

Swipe down from the top of the screen when plugged in to the USB. May need 2 swipes.

When you swipe down you get an Android notification saying

"USB charging this device"

"Tap for more options"

That is where you tap. You can then select "Transfer files" from the next screen. It should then show up on your PC file manager.
